

## **Abstract**

### **SCRIBE SEAL PROVIDING ENHANCED SUBSTRATE NOISE ISOLATION**

5           Multiple scribe seals are provided around an integrated circuit on a die to  
attain enhanced substrate noise isolation. In one embodiment, an inner scribe  
seal prevents mobile ions from entering the integrated circuit, and an outer scribe  
seal provides mechanical strength to the die. In addition, both the inner scribe  
seal and the outer scribe seal are designed to offer high resistance path to  
10       substrate noise. Due to the high resistance, the noise that would be coupled to  
various portions of the integrated circuit may be reduced.
